TARUN KISHORE

Madurai, Tamil Nadu, India • +91 9952840983 • tarunksu30@gmail.com • LinkedIn • GitHub

PROFESSIONAL SUMMARY

Software Development Engineer II with 3 years of experience building cloud-native distributed systems using Java, Spring Boot, React, and Microsoft Azure. Promoted to SDE II for ownership in cloud migration, platform engineering, and high-impact product delivery. Skilled in system design, reactive programming, CI/CD automation, and AI-assisted development workflows that accelerate delivery without compromising quality.

TECHNICAL SKILLS

Languages: Java, JavaScript, TypeScript, SQL
Backend: Spring Boot, Spring WebFlux, RESTful APIs, Microservices Architecture, Apache Kafka, gRPC
Frontend: React, Next.js, HTML5, CSS3, Tailwind CSS
Cloud & DevOps: Microsoft Azure, Docker, Kubernetes, CI/CD Pipelines, Azure Pipelines, Infrastructure as Code
Databases: PostgreSQL, MySQL, MongoDB, Redis, Elasticsearch
Core Concepts: Data Structures & Algorithms, Distributed Systems, System Design, Object-Oriented Design, Reactive Programming, API Design, Concurrency, Design Patterns, Event-Driven Architecture
Tools & Testing: Git, Gradle, Maven, JUnit, Mockito, Testcontainers, Postman, Jira, Agile/Scrum, Claude Code, GitHub Copilot

PROFESSIONAL EXPERIENCE

Software Development Engineer II | Rocket India (Mr. Cooper Group) | Chennai — Apr 2026 – Present

- Acted as primary code reviewer across the integration estate, reviewing 739 PRs across ~69 repositories (2.5x personal PR volume) to enforce architectural standards.
- Led JDK 25 and Spring Boot 4 modernization across 4 critical services; drove cross-cutting security hardening to eliminate hardcoded credentials across ~10 production services.
- Executed platform-wide infrastructure optimizations, rightsizing AKS workloads to remove 71 over-provisioned pods across Prod and UAT, yielding ~$31K/year in cost savings.

Software Engineer | Rocket India (Mr. Cooper Group) | Chennai — Jan 2024 – Mar 2026

- Scaled the core servicing API to absorb 4.6x traffic growth (9M requests/day, ~32K RPM peak), while successfully dropping p99 latency to 15ms.
- Resolved critical database degradation by eliminating an N+1 query in a critical service, cutting DB load by ~90% and doubling PATCH throughput.
- Removed an $O(n^2)$ algorithmic hot path in heavy loan histories, cutting p99 latency by 24%; architected APIM caching & timeouts bounding worst-case latency across 5 services.
- Authored 295 PRs across ~49 repositories; refactored ~216K lines of code and deprecated 32K lines of legacy technical debt.
- Awarded Challenger Award (Q2 2024) for infrastructure cost optimizations and shipping a Spring Boot service in 1 day; enhanced CI/CD achieving 383 runs/month at ≥95% success rate.

Software Engineer Trainee | Mr. Cooper | Chennai — Jul 2023 – Dec 2023

- Designed and implemented a reactive orchestrator service using Spring WebFlux to coordinate concurrent backend workflows, improving throughput by 3x and reducing resource utilization by 30%.
- Built a production-grade end-to-end test automation framework using Nightwatch.js, achieving 85% test coverage and reducing manual regression effort by 70%.
- Developed a customer-facing Originations Dashboard using Next.js and TypeScript, enabling seamless multi-step user journeys with client-side state management and server-side rendering.
- Identified and resolved API bottlenecks through profiling and load testing, reducing P95 response latency by 40% across 5 critical service endpoints.

PROJECTS

Project Loom — Distributed Job Orchestration Engine | Java 21, Spring Boot, Kafka, Redis, PostgreSQL, Docker

- Built a production-grade distributed DAG-based job orchestration engine (mini-Airflow) with 5 Spring Boot microservices: REST API with DAG validation, reactive scheduler (R2DBC + WebFlux), horizontally-scaled workers with Redisson distributed locking, and a monitoring service with DLQ browser.
- Implemented idempotent task execution, exponential backoff retry with dead-letter queuing, optimistic locking for concurrency control, post-commit Kafka event publishing, and end-to-end observability with Prometheus + Grafana. Containerized with Docker Compose and tested with Testcontainers.
- GitHub: github.com/tarunkishore2303/project-loom

EDUCATION & CERTIFICATIONS

B.Tech in Information Technology | Thiagarajar College of Engineering | Apr 2023 | CGPA: 8.8/10
Certifications: Azure Fundamentals (AZ-900) | Azure AI Fundamentals (AI-900) — Microsoft
